

# FOX France Oxygénation

## Oxygenator : Jets platform

The jets platform is a device to dissolve oxygen into the water installed on a waterfall at least 80cm.

The jets platform treats all water flow, from 10 l/s to 300 l/s.

Waterflow adjustments devices proposed by FOX are particularly easy to use.

When there is no waterfall, one or more pump(s) are installed to elevate the water with the lowest energy cost.

The jets platform is studied for each case.

FOX France Oxygénation has produced more than 500 jet platforms. They have been designed specifically for the given waterfall and ponds (or channel).  
Manufacture : stainless steel.

Example : Fresh water at 14°C – Waterfall 100 cm – O<sub>2</sub> at the inlet 8 ppm.

O <sub>2</sub> at the outlet	15 ppm	16 ppm	17 ppm	18 ppm	19 ppm	20 ppm
Efficiency	97%	94%	91%	89%	86%	84%
